

Long Range Video audio Power Modem

Send video, audio and DC power over RG59 coax up to 500m

This product provides a solution for sending video audio and DC power over a single coax cable. DC power is transmitted over long distances (500m at 200mA when using heavy duty RG6 cable). 28 volt DC is injected at the recorder end, then the voltage is adjusted to 12v DC by the receiver end unit, this allows the voltage to compensate for large volt drops caused by the resistance of long cables.

Connection of VDS2100 Sender and VDS2200 Viewer
